EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

{A} Page 1, after the title, insert,

"This is a reissue of S/N 08/941,539, filed 9/30/97, U.S. Pat No. 6,366,731, dated 4/2/2002.".

Reasons For Allowance

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art discloses recording transport stream with a PAT,

but, fails to teach, disclose or fairly suggest the combination as claimed, associated with a multi-media system for transferring a single program transport stream comprising:

o an input device for entering a program number of an intended program;

o a receiver including a *first digital interface*, the receiver receiving a multi-program transport stream and, when extracting *only a single program transport stream* of a program corresponding to the program number from the received multi-program transport stream,

o transferring the extracted single program transport stream together with a corrected program association table (PAT) including the program number and program information corresponding to the program number and

o a recording/reproducing device including a *second digital interface*, for receiving the transferred extracted single program transport stream together with the corrected

program association table and recording the single program transport stream transferred from the receiver via the second digital interface, for reproducing the recorded single program transport stream, and for transferring the reproduced single program transport stream to the receiver via the first digital interface, *wherein receiving the single program transport stream together with the corrected program association table by the recording/reproducing device obviates need for a selection device associated with the recording/reproducing device to select a program for recording.*

Regarding claims 3, the prior art fails to teach disclose or fairly suggest the combination associated with a multi-media system for transferring a single program transport stream, including at least a receiver for receiving a multi-program transport stream and a recording/reproducing device for recording/reproducing a selected single program transport stream, wherein the receiver comprises:

- o an input device for entering a program number of an intended program;
- o a first signal processor for parsing a program association table (PAT) from the received multi-program transport stream, and for separating a video stream and an audio stream of an intended program, based on the parsed PAT, to decode a video signal and an audio signal, respectively;
- o a PAT corrector for correcting the parsed PAT to output a corrected PAT including the program number and program information corresponding to the program number, a single transport stream extractor, which, when extracting only the selected single transport stream corresponding to the program number from the received multi-program transport stream, outputs the selected single program transport stream, together with the corrected PAT; and a first digital interface for transferring the selected single program transport stream and said corrected PAT as isochronous packets, and wherein the recording/reproducing device comprises:
 - o a second digital interface for de-packetizing the single program transport stream transferred as the isochronous packets via the first digital interface; and
 - o a second signal processor for recording the selected single program transport stream, provided by the second digital interface, onto a recording medium, and for providing a reproduced single program transport stream reproduced from the recording medium to the second digital interface, wherein said transferring of said selected single program transport stream

Art Unit: 2169

and said corrected PAT obviates need for a selection device associated with the recording/reproducing device to select a program for recording.

Claims 20 and 21 system claims, which are deemed allowable for substantially the same reasons claim 1, above.

Claim 15 is the method associated with the apparatus claims and is allowable for substantially the same reasons as the system claims.

Regarding new claim 22, which the scope differs but, is allowed for substantially the same reasons, as recited in all previous method and apparatus claims but,

o is broader in view of the limitation:

- "providing a program selection information",

which is deemed broader than the previous claims,

wherein the previous claims recite, wherein the program selection information entered is, "a program number", therefore, the previous claims, are narrower in view thereof.

The prior art fails to teach, disclose or fairly suggest based on all other limitations in, combination, including wherein the by performing correction of the program information for, a single program, in combination with the limitation, that it obviates the need for a selection device associated with the recording/reproduction device to select a program for recording, therefore, deemed not taught, discloses or even suggested by the art of record, in view of the combination of pre-processing of the program information and thereafter, thru the digital interfaces between, as understood, as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
